Profile

Design Principles & Tech Stack

- Dark broadcast-editorial aesthetic — feels like a premium sports channel's digital product
- Every component maps directly to a Flask API endpoint — no mock data in production
- Football and Cricket only — Wrestling removed from all pages, data, and navigation
- Tailwind CSS v3 with custom design tokens (bg-base, accent, text-t1, etc.)
- Mobile-responsive — sidebar hidden on screens smaller than lg, tabs collapse to scrollable pills
- Auth-aware UI — unauthenticated users see Landing; post-login all 8 app pages unlock
- Axios calls all go through /api/v1/... proxied to Flask on localhost:5000

Navigation Map — All Routes

Page	Route (client)	Auth?	Navbar Link	Primary API

Landing Page

Public marketing page — unauthenticated users only

Layout Wireframe

[illegible]

Component Breakdown

NAVBAR

- Logo: ■ SPORTIFY (Bebas Neue font, gradient text)
- Right side: [Log In] outline button + [Sign Up] accent button
- Clicking Sign Up opens auth modal (or routes to /auth page)
- Logo click scrolls to top

HERO SECTION

- Full-viewport height section with dark gradient background
- Left column: LIVE pill badge (animated pulse dot), H1 in Bebas Neue 72px
- Subtitle: '... Football, Cricket — live scores, deep statistics'
- Two CTA buttons: primary accent, secondary ghost
- Right column: LiveScorePreview component (3 stacked mock match cards)

API CALLS:

GET /matches/live (for preview cards on the right)

STATS BAR

- 4 stat blocks in a row: value in Bebas Neue 42px (accent-light colour)
- Labels: 'Live Matches Tracked', 'Sports Covered', 'Fans Registered', 'Score Refresh'
- Static values — no API call needed, these are marketing numbers

FEATURES GRID

- 6 feature cards in 3-col grid (2-col on tablet)
- Each: icon in rounded square, title (Rajdhani 17px), 2-line description
- Hover: border lights up to accent colour, card lifts 4px

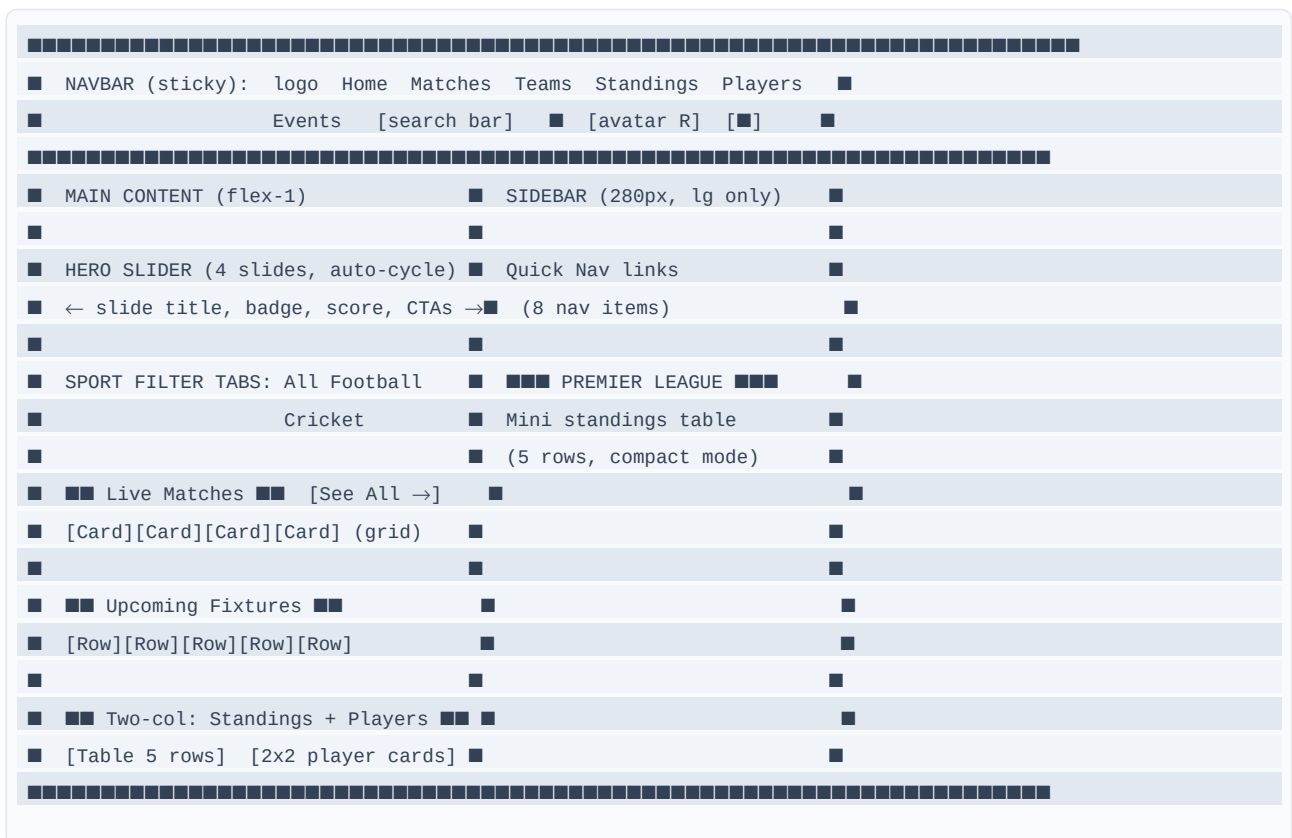

SPORT SHOWCASE

- 2 sport cards side by side: Football and Cricket only
- Each: gradient BG matching sport colour, emoji, sport name, tagline, match count
- Clicking either card routes to /teams?sport=Football or /teams?sport=Cricket

API CALLS:

GET /sports (fetch real match counts per sport)

Layout Wireframe

API Calls for Dashboard

GET /api/v1/matches/live

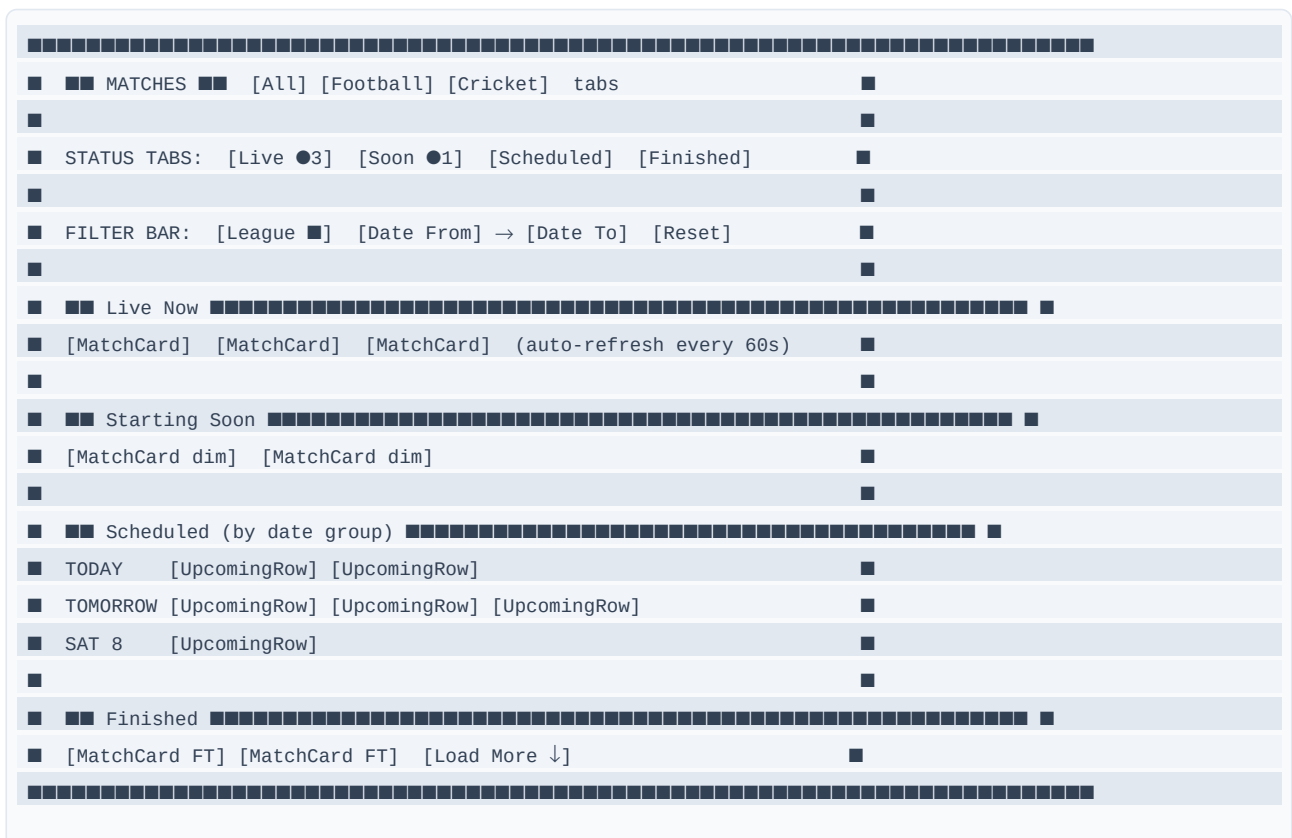

GET	/api/v1/matches?status=scheduled&limit;=5
GET	/api/v1/leagues/1/standings
GET	/api/v1/players?limit=6&sort;=rating

Displays	User Actions
• HeroSlider — 4 slides cycling every 5s with prev/next arrows • FilterTabs — All / Football / Cricket • MatchCard grid — live score, badge, elapsed time, status pill • UpcomingRow list — sport icon, team names, league, datetime • StandingsTable compact — 5 rows with form dots • PlayerCard 2x2 grid — photo, name, team, rating, top stat	• Filter live matches by sport tab • Click MatchCard → opens MatchModal with full detail • Click 'See All →' → routes to /matches page • Click 'Full Schedule →' → routes to /matches?tab=scheduled • Click 'Full Table →' → routes to /standings • Click 'All Players →' → routes to /players • Click standing row → routes to /teams/:id

Custom APIs You Need to Add

These endpoints are NOT in the current API reference but are required by the frontend pages above. Your teammates need to build these in Flask.

GET /api/v1/matches?home_team_id=:id

Team Detail page needs fixtures/results filtered by team — current /matches only filters by sport/league/status

HIGH

Team Detail page needs fixtures/results filtered by team — current /matches only filters by sport/league/status

GET /api/v1/matches?away_team_id=:id

Same — need away team filter too. Alternatively add team_id param that checks both home and away

HIGH

Same — need away team filter too. Alternatively add team_id param that checks both home and away

GET /api/v1/players?position=:pos&sort=:field

Players page needs position filter (GK/DEF/MID/FWD for football, BAT/BOWL/ALL/WK for cricket) and sort by goals/runs

HIGH

Players page needs position filter (GK/DEF/MID/FWD for football, BAT/BOWL/ALL/WK for cricket) and sort by goals/runs

GET /api/v1/teams/:id/stats

Team Detail Statistics tab — goals scored, conceded, clean sheets, top scorer, top assister. Aggregated from player_match...

Custom API Summary by Priority

8	5	2	15
HIGH — Build first	MED — Build next	LOW — Nice to have	TOTAL new APIs

The existing 52 endpoints from your API reference cover auth, basic CRUD, and community features well. The 15 custom APIs above are gaps discovered by mapping each frontend page's data needs to the current API list. All HIGH priority ones must be built before the respective frontend page can go live.
